A brief guide to access the Wound Healing and Management (WHAM) Node via JBI CONNECT+

To access JBI CONNECT+ and the Wound Healing and Management Node go to JBI Homepage at http://www.joannabriggs.edu.au
To enter the database click on JBI CONNECT+ as indicated by the red arrow.
Login page: your username and password are both the same word: **wound**.
To go directly to the Wound Healing and Management Node (WHAM) click on the Node title as indicated by the red arrow.
Enter your search term; in this example I have entered the term ‘wound’.

And/or use the drop-down menus to define the boundaries of your search.
The search term ‘wound’ within the WHAM Node returned 35 Evidence Summaries; 7 Recommended Practices; 3 Best Practice Info Sheets and 3 Consumer Info Sheets.

You will also notice that a publication may be duplicated in other nodes; in this example, some material that is located in the WHAM Node is also appropriate to other nodes such as Aged Care; Burns Care; General Medicine and Emergency and Trauma, to name a few.
To search for Evidence Summaries in the WHAM Node select the Evidence Summaries tab.

To access the information, click on the title or on the pdf. (You may need to turn off the pop-up blocker to access these pdf files).

At this time there are 4 pages of Evidence Summaries; all efforts are made to update the material annually as well as develop new material.

When you have completed your session, simply logout.
